

Die Vortragenden

Dr. Matthias Kammerer
SAP AG

Dr. Matthias Kammerer joined SAP in 2000 after receiving his PhD in "Germanistische Linguistik" at the University of Heidelberg in 1999. As a technical support consultant, his task is to design and implement the DTD and stylesheets for the documentation written at SAP AG.

Christian Lieske
SAP AG

Christian Lieske is a member of the SAP group for Multilingual Technology. He is involved in the implementation of Natural Language Processing (NLP) and Content Engineering. The projects he works on include tools for quality assurance for terminology, terminology extraction and checking, style checking, and XML-related projects for various types of content. Furthermore, he develops concepts for the internationalization and localization of content. He is actively involved in standardization projects initiated by OASIS and the W3C. His personal interests lie in internal consulting related to NLP, XML, and general authoring and localization issues. Before joining SAP, he worked on industry-driven projects run by NLP research institutes. He holds a degree in Computer Science with a special focus on natural language processing and artificial intelligence.

Zum Inhalt des Vortrags

The SAP XML Documentation Project (XDP) is one of the SAP strategic initiatives in the area of XML-based technical documentation. The presentation will give an overview of the technology, user base, content types, and governance model for the project. In addition, the speakers will give a broad insight into the project's motivation and history, and discuss some of the challenges and future milestones.
